Top innovations in electrification, automation, and digitalization – for the U.S. and by the U.S.

Innovation Day USA 2017 | Princeton, March 27, 2017
Kurt D. Bettenhausen, Siemens Corporate Technology USA
Notes and forward-looking statements

This document contains statements related to our future business and financial performance and future events or developments involving Siemens that may constitute forward-looking statements. These statements may be identified by words such as “expect,” “look forward to,” “anticipate” “intend,” “plan,” “believe,” “seek,” “estimate,” “will,” “project” or words of similar meaning. We may also make forward-looking statements in other reports, in presentations, in material delivered to shareholders and in press releases. In addition, our representatives may from time to time make oral forward-looking statements. Such statements are based on the current expectations and certain assumptions of Siemens’ management, of which many are beyond Siemens’ control. These are subject to a number of risks, uncertainties and factors, including, but not limited to those described in disclosures, in particular in the chapter Risks in the Annual Report. Should one or more of these risks or uncertainties materialize, or should underlying expectations not occur or assumptions prove incorrect, actual results, performance or achievements of Siemens may (negatively or positively) vary materially from those described explicitly or implicitly in the relevant forward-looking statement. Siemens neither intends, nor assumes any obligation, to update or revise these forward-looking statements in light of developments which differ from those anticipated.

This document includes – in IFRS not clearly defined – supplemental financial measures that are or may be non-GAAP financial measures. These supplemental financial measures should not be viewed in isolation or as alternatives to measures of Siemens’ net assets and financial positions or results of operations as presented in accordance with IFRS in its Consolidated Financial Statements. Other companies that report or describe similarly titled financial measures may calculate them differently.

Due to rounding, numbers presented throughout this and other documents may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures.
MindSphere
Open operating system for the Internet of Things

Artificial Intelligence
The next level of intelligence

Additive Manufacturing
The Future of Manufacturing

Microgrids
Key component in a decentralized energy supply

Autonomous Robots
Industrie 4.0 live

Intelligent Infrastructure
Digital transformation of buildings and travel
Our cloud-based, open IoT operating system

MindSphere in action

- MindSphere has data analytics and connectivity capabilities, tools for developers, applications and services.
- It enables industrial enterprises to improve the efficiency of systems through the acquisition and analysis of large quantities of production data.
Additive Manufacturing

The Future of Manufacturing

– Additive Manufacturing (AM) links the virtual and the real world – bringing Digitalization into production.

– Siemens industrializes AM by mastering the entire software and hardware value chain.

– We use AM for our own products and for customers.

Kurt D. Bettenhausen
Autonomous systems carry out jobs on their own—without having detailed programming instructions.

They know their skills and understand tasks.

These robots can even readjust themselves, in real time if necessary, to react to unforeseen events like pieces that may have shifted on an assembly line.
Siemens uses Artificial Intelligence (AI) already to optimize industrial applications. The technology helps optimize the emissions from and performance of gas turbines and wind turbines, for example.

We have been working on AI for more than 30 years.
Microgrids

Key component in a decentralized energy supply

- Microgrids are the next big player in the world’s clean energy transformation.
- They create an important emerging growth market in a customer-centric distributed energy supply.
- About two thirds of respondents to a survey among utilities plan to install a microgrid in the next five years.
Our intelligent infrastructure solutions are bringing American buildings and transportation systems into the 21st century.

- Rail systems will be safer and more reliable.
- Travel will be smarter and connected.
- Buildings will be better managed and energy efficient.
